

Instructions For Use

Power cuts are comfortable and precise

Box cutting side buttons and the ultra sharp blade maintain optimum cutting position for cutting tops of boxes

3 Buttons: right, left & top power cuts, all with spring-back safety action

High-visibility color

One piece design pivots open to change blades, means no parts to lose

Durable wear guard

Quick blade change knob means blade change in seconds

Ergonomic handle provides for comfort in all cutting positions

Uses stiffer SP-017 safety blades, for smoother, efficient cutting through most packaging materials

EZ3™ Safety Cutter

Blade Change

Using the SP-017 single-notch blade

Rotate blade change wheel counterclockwise until cutter body opens

Remove Spare Blade from blade compartment

Insert Blade underneath blade retainer, aligning blade notch with alignment tab. Close cutter body, rotating wheel clockwise to tighten. Dispose of used blade safely.

General Safety Tips for Cutting

The most common cause of accidents related to box cutters take place when an employee uses a standard knife and is distracted or slips while cutting the top of a box and strikes his/her forearm or thigh with an exposed blade. Remember to always:

- Approach work in a balanced body position
- Turn the item to be cut 5 degrees to the left so you are cutting away from the body
- Look at the cut line – never look away or become distracted by talking with someone
- Place your other hand on the opposite side of the case away from the cutting line
- When not in use, see that you store your knife or cutter in a safe location. Make sure the blade is safely stored away.
- Utility knives, box cutters or any safety knives or cutters should be discarded or repaired if not working properly. The safety features of knives and cutters should not be circumvented or removed. Knives with damaged safety mechanisms should be discarded.
- Utility knives work best when they're sharp. They are easier to operate and safer to use when sharp.
- Use knives and cutters for their intended purpose. Using your knife in a way for which it was not designed or on the wrong materials can damage the blade and cause injury to yourself or others.
